

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Currently Amended) A method for displaying data using a window having a width boundary comprising:

determining that data for a list item cannot be displayed within the width boundary;

creating a first window and a second window based on the determination that data for a list item cannot be displayed within the width boundary;

selecting from the data for the list item a data element that will be displayed in both the first window and the second window;

splitting the data for the list item into a first portion and a second portion, such that the first portion including the data element will fit into the first window;

displaying the first portion of the data for the list item and the data element in the first window; and

displaying the second portion of the data for the list item and the data element wrapped into the second window[[: and]].

~~displaying at least one element of data from the first portion of the list item in the second window to identify correspondence between the second portion and the first portion.~~

2. (Cancelled).

3. (Original) The method for displaying data of claim 1, wherein the data for a list item comes from more than one data source.

4. (Cancelled).

5. (Previously Presented) The method for displaying data of claim 1, wherein displaying the second portion of the data further comprises:

displaying a color to comprehend whether a row of data in the second window corresponds to a row of data in the first window.

6. (Cancelled).

7. (Cancelled).

8. (Previously Presented) The method for displaying data of claim 1, further comprising:

handling an event associated with the first window such that the event synchronously affects the second window.

9. (Currently Amended) A system for displaying data using a window having a width boundary comprising:

means for determining that data for a list item cannot be displayed within the width boundary;

means for creating a first window and a second window based on the determination that data for a list item cannot be displayed within the width boundary;

means for selecting from the data for the list item a data element that will be displayed in both the first window and the second window;

means for splitting the data for the list item into a first portion and a second portion, such that the first portion including the data element will fit into the first window;

means for displaying ~~[[a]]~~ the first portion of the data for the list item and the data element in the first window; and

means for displaying the second portion of the data for the list item and the data element wrapped into the second window~~[[; and]]~~.

~~means for displaying at least one element of data from the first portion of the list item in the second window to identify correspondence between the second portion and the first portion.~~

10. (Cancelled).

11. (Original) The system for displaying data of claim 9, wherein the data for a list item comes from more than one data source.

12. (Cancelled).

13. (Previously Presented) The system for displaying data of claim 9, wherein the means for displaying the second portion of the data further comprises:

means for displaying a color to comprehend whether a row of data in the second window corresponds to a row of data in the first window.

14. (Cancelled).

15. (Cancelled).

16. (Previously Presented) The system for displaying data of claim 9, further comprising:

- means for handling an event associated with the first window such that the event synchronously affects the second window.

17. (Currently Amended) A computer program product for displaying data using a window having a width boundary comprising code for causing a processor to perform the steps of:

determining that data for a list item cannot be displayed within the width boundary;

creating a first window and a second window based on the determination that data for a list item cannot be displayed within the width boundary;

selecting from the data for the list item a data element that will be displayed in both the first window and the second window;

splitting the data for the list item into a first portion and a second portion, such that the first portion including the data element will fit into the first window;

displaying the first portion of the data for the list item and the data element in the first window; and

displaying the second portion of the data for the list item and the data element wrapped into the second window[[]; and]].

~~displaying at least one element of data from the first portion of the list item in the second window to identify correspondence between the second portion and the first portion.~~

18. (Cancelled).

19. (Original) The computer program product for displaying data of claim 17, wherein the data for a list item comes from more than one data source.

20. (Cancelled).

21. (Previously Presented) The computer program product for displaying data of claim 17, wherein displaying the second portion of the data further comprises:

displaying a color to comprehend whether a row of data in the second window corresponds to a row of data in the first window.

22. (Cancelled).

23. (Previously Presented). The computer program product for displaying data of claim 17, further comprising code for causing a processor to perform the step of:

handling an event associated with the first window such that the event synchronously affects the second window.

24. (Currently Amended) A method for displaying data on a display screen comprising:

creating a first window and a second window if ~~[[the]]~~ data for a list item cannot be displayed within a width of a single window;

selecting from the data for the list item a data element for display in the first window and the second window;

displaying a first portion of the data for the list item and the data element on a line in the first window; and

displaying a second portion of the data for the list item and the data element wrapped onto a corresponding line in the second window~~[[; and]]~~.

~~displaying at least one datum from the first portion of the list item on the corresponding line in the second window.~~

25. (Cancelled).

26. (Cancelled).

27. (Original) The method for displaying data of claim 24, wherein the data for the list item comes from more than one data source.

28. (Cancelled).

29. (Previously Presented) The method for displaying data of claim 24, wherein displaying the second portion of the data further comprises:

displaying a color to comprehend that the line in the first window wraps to the corresponding line in the second window.

30. (Cancelled).

31. (Cancelled).

32. (Cancelled).

33. (Previously Presented) The method for displaying data of claim 24, further comprising:

handling an event associated with the first window such that the event synchronously affects the second window.

34. (Previously Presented) The method for displaying data of claim 1, further comprising:

adding a distinguishing display feature to the first portion of the data for the list item in the first window in response to selection of the first portion by a user utilizing the first window; and

adding the distinguishing display feature to the second portion of the data for the list item in the second window in response to selection of the first portion by the user utilizing the first window.

35. (Previously Presented) The method for displaying data of claim 34, wherein the distinguishing display feature is a color charge.

36. (Previously Presented) The method for displaying data of claim 3, wherein the more than one data source includes a website.

37. (Previously Presented) The method for displaying data of claim 8, wherein the event includes sorting the data for the list item.

38. (Previously Presented) The computer program product of claim 17, further comprising code for causing a processor to perform the steps of:

adding a distinguishing display feature to the first portion of the data for the list item in the first window in response to selection of the first portion by a user utilizing the first window; and

adding the distinguishing display feature to the second portion of the data for the list item in the second window in response to selection of the first portion by the user utilizing the first window.

39. (Previously Presented) The computer program product of claim 38, wherein the distinguishing display feature is a color change.

40. (Previously Presented) The computer program product of claim 19, wherein the more than one data source includes a website.

41. (Previously Presented) The computer program product of claim 23, wherein the event includes sorting the data for the list item.

42. (Previously Presented) The method for displaying data of claim 24, further comprising:

adding a distinguishing display feature to the line displaying the first portion of the data for the list item in the first window in response to selection of the line by a user utilizing the first window; and

adding the distinguishing display feature to the corresponding line in the second window in response to selection of the line by the user utilizing the first window.

43. (Previously Presented) The method for displaying data of claim 42, wherein the distinguishing display feature is a color change.

44. (Previously Presented) The method for displaying data of claim 27, wherein the more than one data source includes a website.

45. (Previously Presented) The method for displaying data of claim 33, wherein the event includes sorting the data for the list item.
